WellSky®

Offering Overview

Imprivata Confirm ID For Clinical Workflows

With WellSky's Electronic Prescribing and Medicines Administration (EPMA) system

Drive adoption of WellSky's EPMA system by simplifying user authentication workflows.

Improve efficiency by replacing usernames and passwords with fast, automated authentication.

Improve auditing by increasing visibility into e-prescribing and other medication management workflows.

Imprivata Confirm ID™ for Clinical Workflows enables fast, secure authentication within the WellSky Electronic Prescribing and Medicines Administration (EPMA) system, including witness signing for drug administering and other medication workflows.

Fast, convenient authentication

To increase security and visibility into clinicians' interactions with prescriptions and patient information, organisations can require providers to authenticate when completing these processes.

Imprivata Confirm ID for Clinical Workflows integrates with the WellSky EPMA system to streamline this workflow by enabling fast, convenient authentication through the simple tap of a proximity badge, replacing the manual entry of usernames and passwords.

By enabling care providers to quickly and conveniently authenticate when completing

workflows within the WellSky EPMA system, Imprivata Confirm ID for Clinical Workflows improves efficiency, increases provider satisfaction, and allows for more time to be spent on patient care, all while improving security, patient privacy, and auditability.

This helps organisations drive adoption of the WellSky EPMA system to transform how automated medicines management and electronic prescribing can be used in delivery of patient care.

Imprivata, the healthcare IT security company, enables healthcare globally to access, communicate, and transact patient information, securely and conveniently. The Imprivata platform addresses critical compliance and security challenges while improving productivity and the patient experience.

For more information about Imprivata Confirm ID for Clinical Workflows, visit: https://www.imprivata.co.uk/uk/clinical-workflows.

"Imprivata optimises our use of the WellSky system by delivering fast, convenient authentication for witness signing. This improves efficiency and helps create a more complete audit trail for prescribing, administering, and disposing of controlled drugs."

Grant Harris, Director of IT at Western Sussex Hospital NHS Foundation Trust

Kay Dolman and Kyle Fabian of Great Western Hospitals NHS Foundation Trust, a large hospital of around 480 beds, have estimated that using ConfirmID for 1 year would save an average of 907 hours per year across the trust. Based on a typical 37.5 hour working week, this equates to a total saving of 24 weeks - saving half a year of work for a Band 5 Nurse in the hospital. This means:
- **More time** at the patient bedside
- **More time** for other clinically important tasks

Imprivata Confirm ID for Clinical Workflows is part of a comprehensive identity and multifactor authentication platform for clinical authentication workflows across the healthcare enterprise.

Imprivata Confirm ID makes security invisible by offering a broad range of innovative, convenient authentication methods, including fingerprint biometrics and proximity badge.

Imprivata Confirm ID combines security and convenience by enabling fast, secure authentication across enterprise workflows while creating a secure, auditable chain of trust wherever, whenever, and however users interact with patient records and other sensitive data.
